Problem setting up slave site

Posted by innamoo - 2009/03/12 23:08

Hello,

I'm hosting my site at Dreamhost. I set up JMS and all the patches without any problems.
Then I created two test slave sites in subdirectories of the main site. They show up in the site manager with status "confirmed". BUT when I click on the links to go to those sites I get an error page:

"Not Found

The requested URL /multisites/aeavienna was not found on this server.

Additionally, a 404 Not Found error was encountered while trying to use an ErrorDocument to handle the request."

Does anybody have experience setting up JMS slave sites on Dreamhost? Any comments on this problem?

Thanks,
Inna

RESOLVED

it was just a wrong pass to the subdirectory.
Everything works just fine.

Thanks,
inna

What did you have to do in the DreamHost panel to get this working?

Currently, I get a 404 error when I go to site.com/joomla/slave or a directory listing (with configurations.php, log folder, etc.) when I go to site.com/joomla/multisites/slave.
