# Site Error from module that I uninstalled

Posted by d2drummer - 2010/11/24 21:55

---

I uninstalled Jevents and now when I go into the manage sites and open/save the site, I get the following error:

Table/View Error  query . DB Error: Table 'DATABASENAME.PARENT_jev_users' doesn't exist
SQL=CREATE OR REPLACE VIEW CHILD_jev_users AS SELECT * FROM `PARENT_jev_users`

How do I go about completely removing all references to JEVENTS?

I am receiving this error on one of the other slave sites when I save it.

Unable to create the symbolic link  -> .

When you decide to remove an extension from the master website, it is recommended that you start to uninstall the extension in all the slave site to avoid they continue to use something that you have removed from the master.

You can go for example in the JMS Tools and "uninstall" the extension in the slave sites.

Once you have removed the extension, also update the JMS Templates where you have declared to "shared" it. In your case, it seems that a JMS Templates rules still declare that you want to share the JEvents after you have uninstalled it from joomla.

In summary, before to uninstall an extension from Joomla, ensure that you don't use it anymore in any slave and in any JMS Template rule.

I understand what you are saying, however, I did uninstall from the slave sites prior to uninstalling from master.

I do not have references to any JEVENT module, component or plugin under any of the websites. However,  under tables, it is showing #__jev_users as a table.

How do I remove that and any other potential reference to JEVENTS.

I was able to resolve the JEVENTS Issue. I had Attend Events installed as well and there was one module still active.

However, I still have this problem on one of my slave sites.

Unable to create the symbolic link -> .

How do I go about diagnosing and resolving the problem.?

Joomla 1.5.22
Version 1.2.43 (Latest available: 1.2.43)
Patches definition Version 1.2.49 (Latest available: 1.2.49)

Thanks
David

When you have an error on a Symbolic Link creation, check that the path is correct.
Check also if you don't already have a physical directory at this location and not a symbolic link.
If you have a physical directory, you have this error because you can not create the symbolic link to replace the physical directory.

You can also have this error message in case where you already have a Symbolic Link that point to another location than the one displayed in the error message.

If you already have a physical directory or a symbolic link with another location that you want to replace with the new Symbolic Link, start to delete the existing directory (or symbolic link) before rebuilding the new Symbolic Link
