

Jms Multi Sites (all editions)

- Joomla 3.1 compatibility
 - Fix the re-installation of a component from the slave site after that the JInstaller is moved in cms directory and that the adapter class name was renamed.

- Joomla 3.x compatibility
 - Fix the processing of the registration button present after the installation.
The "component not" found error was due to the "<form>" tag that now surround the whole component message and forbid that an extension use also the "<form>" tag inside its description.

- Joomla 2.5, 3.x compatibility
 - Remove some PHP Strict and PHP Notice messages in the installer.
 - Improve JMS Tool menu to display the plugin language name instead of the plugin internal name (code)

Bundled with Patches definition 1.3.12

- Add JMS Tools (install) definitions for :
 - Spider Catalog
