Podcast Manager
Posted by thirdhatch - 2012/06/11 03:40

We are trying to use Podcast manager to share content across multiple sites. We see the article show up from the Podcast manager but the player and content of the articles does not show up.

We would like to request compatibility for a podcast manager so we can use this type of media sharing across our sites.

Thanks!

The "postcas manager" is not defined in the JMS Tools menu.
If you want that we add the definition of this extension in to the JMS tool, send us the extension in the attachement of an email.
See "contact us" for the email address.

As we never received this extension for review, we are not able to answer your question yet.
We will wait that you send us the extension.

Did you re-install the extension in the slave site or did you just defined it with the JMS tool menu.

Can you give a detailled scenario that explain how to reproduce the problem that you report.

I'm sending this to you for review now.

The ideal behavior is that the master site retains all of the tables and simply replicates the data to the slave sites.

The podcast manager currently uses the joomla content system to list the podcasts but the player and data does not show up because the tables are not replicated to the slave sites.

Thanks!

Its definition is added for the next Jms multisite release 1.2.92
