Jms multisite for joomla version 1.3.48 - All Editions

Add a special JMS Tools code to recognize the DOCMan vers 2.0 that is now defined by the authors as a core joomla extension with a special installer.
This now allows displaying the DOCman extension in the JMS Tools menu to perform the install and the uninstall from the JMS Tools menu instead of using the EXTman that does not work in a slave site and delete the files required by the master.

Bundled with Patches definition 1.3.44

- Add JMS Tools (install) definitions for :
  - JSN ImageShow
  - Simple Image Gallery - PRO
