Com-Property
Posted by stainless - 2009/06/25 19:31

Hi Edwin,

Thanks for the information on the side by side, now I understand the differences, it is a little hard to find.

I would like to know if you can quickly test out com-property.com component... We are wanting people to register with ABC.com and put property data in here and the data also shows on ABCRealEstate.com with a different design.

Thanks in advance,
Chas

Chas, can you give me the direct url where I can download the component that you want that I test or send me the extension directly by email.

When I click on the dowload menu of this "com-property.com" website, I receive an "Internal Server Error".

Here is the direct URL, http://www.com-property.com/down/com_properties.zip

If that doesn't work, what is your email to forward it to you.

Regards,
Chas

Dear Chas,
I was able to download it.
So I will have a look on it and will give you a feedback tomorrow.

Regards
Edwin

_____

Dear Chas,
I have installed com-property on a master and slave site with success.
I have added the definition of this extension in the JMS 1.2.0 RC2 to also allow distribute the installation on multiple slave sites.
I still have to test the sharing of this extension between slave sites.

So in summary, it works.

Regards
Edwin

_____

Thanks Edwin! I will let my developer know and we will plan accordingly.

Regards,
Chas
