Phoca SEF
Posted by wtfbrb - 2009/08/23 23:57

I quit using sh404sef due to virtuemart issues...back to joomla sef which means I need something to catch 404 and redirect them to the proper page...also good for transfering sites...anyhow I get this error when I try to use it on a slave site:

Warning: mysql_num_rows(): supplied argument is not a valid MySQL result resource in /home/meadows/domains/mvmdata.com/public_html/libraries/joomla/database/database/mysql.php on line 344

Warning: mysql_num_rows(): supplied argument is not a valid MySQL result resource in /home/meadows/domains/mvmdata.com/public_html/libraries/joomla/database/database/mysql.php on line 344

I have 2 small prodution sites on this multi-site I'm hoping to get my big sites over there but need this first.

It is not easy to identify which extension may cause these warnings.
The only way that I know to identify the origin consist in debugging the code and adding traces when it such conditions happen.

If you want that we debug the code on your server to tell you the extension that at the origin of this error, this is possible with our billable support that you can order at http://www.jms2win.com/download?page=shop.product_details&flypage=flypage.tpl&product_id=35&category_id=1

You say that Phoca is compatible and that you have other issues.

Which are the issues.

I found the solution, the tables are not created for this extension on slave, so I used the following to create them just replaced jos_ with slave prefix and ran in phpmyadmin.

```
CREATE TABLE jos_phocasef_url
( id int ( 11 ) NOT NULL auto_increment ,
cw int ( 11 ) NOT NULL default '0' ,
cr int ( 11 ) NOT NULL default '0' ,
new_url varchar ( 255 ) NOT NULL default '' ,
old_url varchar ( 255 ) NOT NULL default '' ,
date_url datetime NOT NULL default '0000-00-00 00:00:00' ,
published tinyint ( 1 ) NOT NULL default '0' ,
ordering int ( 11 ) NOT NULL default '0' ,
PRIMARY KEY (id) ) ;
CREATE TABLE jos_phocasef_ref (
id int ( 11 ) NOT NULL auto_increment ,
count_url int ( 11 ) NOT NULL default '0' ,
ref_url varchar ( 255 ) NOT NULL default '' ,
ref_to_url varchar ( 255 ) NOT NULL default '' ,
date_url datetime NOT NULL default '0000-00-00 00:00:00' ,
published tinyint ( 1 ) NOT NULL default '0' ,
ordering int ( 11 ) NOT NULL default '0' ,
PRIMARY KEY (id) );
```

Also an fyi sh404sef is currently a dead project unless someone else takes it over...so joomla default sef and phocasef seems to me as the only way to go.

Thank you for those information.
When you say that table jos_phocasef_url was not created in the slave site, can you explain the procedure that you have used to install the extension.

There are 3 method to install an extension into a slave site:
1) Re-install the extension in the slave site itself using the Joomla Extension / Install procedure
2) Replicate a website where the extension is already installed.
3) Use the JMS tools to install the extension. In this latest case, this only work with extensions defined in the JMS tools as we have to provide manually the list of tables that must be copied or shared for each extension. You have different icons to show you if you can safely install the extension. So if you have used this 3rd method, as phoca_sef is not yet declared, this may be normal that you don't have this table present in the slave site.

We will review this extension and add its definition for the next release of JMS that we hope publish soon (probably begin of next week) with other additional extension definitions.

The list of extension currently defined in the JMS Tools can be get when you click on the "help" button of the JMS Tools or directly in this page http://www.jms2win.com/component/content/article/135

I had installed and pushed it with jms tools and when that didn't work I re-installed on slave and that still didn't create tables...thanks.

If you have tried with the JMS Tools it will not yet work as I have not yet defined this extension as mentioned in my previous reply.

While it is not defined in JMS, you have to go in the slave site itself and re-install the Phoca_SEF with the standard Joomla / Install procedure

I hope add it this week-end and release the update begin of next week with other extension defintion included
