Rockettheme's Gantry Frameworks v2.0 Template

Posted by KingoftheRoad - 2010/02/06 15:49

Hi Edwin,

It's Seth again B)

Rockettheme lauched a new series of Gantry Frameworks 2.0 Templates. In JMS, I found that some parameters of the template configuration cannot be set. I tested it in a standalone Joomla, it works normaly.

I saw the file params_{multisite_id}.ini is created in the template root folder and is writable.

I can set some parameters in JMS, but not others.

I will send you a Gantry Frameworks template (Rockettheme Quasar) as well as a screen capture showing which parameters cannot be set in JMS.

Edwin, I have to say "Thank you so.....Much!" again for your quick response. I understand there must be lots of extension you need to work on. And your support is amazingly good!

No hurry.....

Thanks a Million!

Seth

I have replied in the forum that Rocket Themes has redevelop specific things and that their modules, themes and other stuf may need to be have fix to manage things correctly like in joomla.

So if you have problem with the parameters, this must be check in the themes itself.
Sometime this is in specific modules or plugin (I don't remember) where they have re-implemented the joomla stuf to become speciifc.

Still cannot get any glues. Will continue to investigate...

The Rockettheme I sent you "Quasar" is a free open-source Gantry Frameworks v.0 template, it does not include any other Rockettheme modules.

All new Rocketthemes will use this framework.

I guess Rockettheme has changed the ways to hand template parameters that disallows us to change the template setting in JMS.

Should you have any glues, please let me know. No hurry as I know you have lots of stuff to do... :P

Thanks.

Seth

_____

Hi Edwin,

I saw your new post in another thread. I have made a quick test, it doesn't work.

Some parameters in parameter.ini even cannot be changed in the Master JMS site. Same behaiour as in the slave site.

If Rocketthem Gantry Frameworks cannot be used in JMS, I think I better drop it.

Pls advise.

Regards,

Seth

_____

If you think that RockertThemes will use this new framework intensivelly in the future, perhaps it will be good to ask them integrate the MULTISITES_ID define in the computation of all the files they store on the disk to make it specific to each websites.

I would give up Rockettheme for the time being.

Their support forum is not like you. No answers had been responsed from them since I first subscribed their plans. :(

Rockettheme replied in the forum that they won't do customization for 3rd party Joomla extension for the time being.

What a pity! We have to give up Rockettheme :(

Hello,
I am also having a lot of issues with Rockettheme templates.

I'm curious what alternative template site did you use?

thanks for any suggestions

This is not our job to fix the rocketthemes development.
So sorry if we do not fix the Gantry framework.

Rocketthemes has other templates that does not use gantry and that are working correctly.

So all rocketthemes are supported except the new ones using granty.

For example check out http://demo.rockettheme.com
I use Infuse, Versatility IV and Catalyst.
They are older templates. Hope they work..
