

Joomla 1.6.0 Beta 5 partial compatibility

We still consider this JMS Multisites Version as an alpha version for Joomla 1.6 event if it is stable for Joomla 1.5.

Here are the changes performed to increase the compatibility with Joomla 1.6 beta 5:

- Remove one Joomla 1.6 database patch that is replaced by new MultisitesDatabase API that allow update the protected JDatabase table prefix.
- Improve Joomla 1.6 beta 5 language file conversion to use "_QQ_" for the quote character.
- Modify the "Site" element to authorize multiple selection and also make it compatible with Joomla 1.6 beta 5.

The "Site" element is used to display the list of JMS Multisites in the extension like "Article Sharing for JMS" or "Multisites Menu Item" and also in "Multisites Search" plugins.

- Modify the "Layout" element to make it compatible with Joomla 1.6 beta 5.

The "Layout" element is used in the menu when defining a website creation form the front-end and to allow selecting a layout.

- Make the front-end compatible with Joomla 1.6 beta 5.

Other JMS multisites changes

- Fix a bug in JMS tools introduced in 1.2.33 concerning the action to share a component.

The new possibility to exclude some share tables from a generic list were resulted in the impossibility to share the extension from the JMS Tools.

- Bundled with Joomla 1.5.20 files
- Bundled with Patch definition 1.2.40

Add JMS Tools (install) definitions for :

- Ninja Content,
- Simple Caddy,
- Sourcerer,
- redEVENT,
- redFORM,
- Multisites Search plugins (MultisitesContent + MultisitesCategories + MultisitesSections);
- Add sharing definition for:
 - Simple Caddy,
 - redEVENT,
 - redFORM.
