

Add new front-end website facilities

- Add the possibility to automatically create a website using the "{user_email}", {user_name}, {user_login}, {user_psw} keywords in the template to allow using the current logged user information to build the new slave site
 - Also give the possibility to send an email notification to the user with the login information.
- Add the possibility to use the {site_prefix} and {site_alias} keywords in the redirect URL parameters present in the front-end website creation (menu item configuration).

Other updates

- Add the possibility to disable the session.cookie_domain used for the single sign-in in case where the hosting provider does not support it.
- Add bulgarian translation files.
- Improve the website replication when third party also use "views" to perform filtered queries. (Case of OSE Membership).
