

Joomla 1.6 and 1.7 compatibility

Under Joomla 1.6 and 1.7 it may happen that some action list combobox does not contain any description due to a problem in Joomla 1.6 and 1.7 that now try convert all the string into HTML. This new feature present in Joomla 1.6 and 1.7 may result with an empty string when the text provided in the combobox contain ISO 8859-1 for accentuated characters. In this case, Joomla is not able to render the string correctly and return an empty string.

This problem is arised with the French version that we now converted in UTF-8.

We also disabled the Joomla 1.6 and 1.7 HTML conversion to keep the text untouched.

Jms multisite Enhancement

We Fixed the cleanup of the template 'toSiteID' and 'toPrefix' to accept the '-' characters that is present in the {site_id-n} keyword.

This now allow using the parts of the site ID to create a new site ID or define a new DB table prefix.

Bundled with Patch definition 1.2.62

- Add JMS Tools (install) definitions for :
 - EasyBlog,
 - JE FAQPro,
 - JE Testimonial,
 - News Pro GK4
- Add Joomla 1.5 sharing definition for:
 - EasyBlog
- Add Joomla 1.6 sharing definition for:
 - EasyBlog
- Add Joomla 1.7 sharing definition for:
 - EasyBlog
