VirtueMart(Product separation and synchronization)

Posted by manish645 - 2010/10/19 11:05

Hi,

I want to create multiple site using ‘JMS multi site’ component. And each site has VirtueMart module.
Now my requirement is following
Master (main) site can show all the products (which are added through slave sites)
And slave site shows only its products

Is it possible?

Not directly.
If you share VM then all the products are shared.
So you have to create different product category in the VM and only display specific category depending on the slave site.

So the slave site will also have all the products but you can just display a specific VM category that would correspond to the product of a specific website.
