

This JMS patch definition:

- Modify the patch for the master configuration.php file to accept that this configuration.php file is not closed with the PHP endmarker (?>). Case may happen with some integrated sytem like Fantastico that create a configuration.php without this marker. Now when the PHP end marker is not found, this is the end of the file that is used.
- Add a patch to RokModuleOrder to allow read the appropriate "params.ini" file when used in a slave site
- Add JMS Tools (install) definitions for :
 - IDoBlog
