Determine site_id in PHP?
Posted by meteu336 - 2009/06/15 02:12

Is is possible (without parsing the baseurl) to determine the site_id from within the PHP code?

Like if I want to have custom CSS styles even though each slave has the same theme

Re:Determine site id in PHP? Posted by edwin2win - 2009/06/15 09:58

YES.

The site id is saved iin MULTISITES_ID define. When this is a slave, the MULTISITES_ID is defined. When not defined, this is the master website.
