Community Builder's Groupjive Plugin

Posted by phleum - 2011/03/14 04:20

Hi Edwin,

I just discovered that another CB plugin has tables that start with something other than "comprofiler." The new version of Groupjive is a plugin to CB, rather than a standalone extension. Tables begin with __gj_.

It would be great if this one could be shared.

Is there a way we can write the definitions ourselves? I'd be happy to share them back to the community if there is a way.

I have correctly received the extension for review.
