## JMS, multisite for joomla - Joomla Multiple Sites and user sharing

Generated: 18 May, 2024, 16:53 can not create template without deployment dir Posted by ashdodia - 2011/11/09 13:21 Hello, I'm using Joomla 1.7.2 and JMS 1.2.68 I'm trying to create new template that will use the same file system as the master file so I leave the deployment directory field empty. As soon as I hit the save button I get an error message "invalid index: deploy\_dir" If I'm trying to create a new site from master without template but with a new DB, I get error message "invalid index: table". Thanks, Saar.

For each message, would you please to give also the source file name and line number that is probably corresponding to each message.

In addition, I don't this is reported as an error mesasge but probably as a "notice message".
