_____

When you have a "blank page", this is the symptom of a PHP fatal error somewhere.
If you are using cPanel, you probably have a "error_log" in the root of your website where you could find additional info.

I have tried reproducing the problem that you described without success.
In my case, the Joomla 1.6.4 + JMS 1.2.56 + Article Sharing 1.1.1 + New Pro GK4 is OK
