

## jomsocial 2.4 - ajax not working on admin side

Posted by ashdodia - 2011/12/21 17:39

---

There is an issue with jomsocial 2.4 that prevent ajax calls from working on slave sites (i.e. rename group categories, event categories etc.)

In order to fix the issue I changed line 15 in file:

/administrator/components/com\_community/admin.community.php

from:

```
define( 'JPATH_COMPONENT' , dirname( __FILE__ ) );
```

to:

```
define( 'JPATH_COMPONENT' , JPATH_ROOT . "/administrator/components/com_community" );
```

Can it be added to the next patch definition ?

Thanks,

Saar.

Please report this issue to JomSocial to ask them fix the bug in their distribution.
