Logging into Slave admin gives me Master admin Posted by buddyq - 2012/02/15 03:24
Whenever I go to either: slave.site.com/administrator OR site.com/multisites/slave/administrator and log in, it gives the master admin. The title of the admin screen is the master sites title. What am I doing wrong?

I noticed that if I already had any files in my deployment directory it would cause this.
