compatibility with i-property

Posted by vedouze - 2011/11/01 18:48

Hello,
I am planning a set of 3 websites under Joomla 1.5 and would like to use JMS for them. I consulted the list of components for sharing but could not find the i-property component I am planning to use:
http://extensions.joomla.org/extensions/vertical-markets/real-estate/10171

I saw other real estate components but after benchmarking I would buy the i-property one only if usable with JMS.

Thanks and regards

We have recently added the iProperty in our list of extension and sorry we didn't update the list in our website.
We just fixed that and refreshed our list with the latest patches definitions.
