Jb extensions
Posted by kremedia - 2011/11/16 14:47

Currently installed jb slideshow and noticed that it brings up the error

"Ooops. It looks like JbLibrary plugin is not installed!"

I installed the jb library but that doesn't have a patch. Can a patch be created for this?

I'm after the joomla 1.5 patch.

In most case, when a plugin or module is not defined in JMS, you can just use the "define" action because most of the plugin and module make reference to components that must be correctly defined.

If you want that we add the definition of an extension, please send us the extension in the attachement of an email.
http://www.jms2win.com/en/contact
See "contact us" for the email

Hi edwin

I tried that, but it didn't work. Will email you the extension. If you can define it, that will be fantastic.
