JINC, Attachments for Joomla!

Posted by bungie - 2011/12/19 15:24

Hi!

Is there any chance that you integrate the sharing of the JINC newsletter component and the Attachments for Joomla! extension in the near future? Both of them are free, and quite usable.

If you are not going to plan that, an alternative solution can be if you send me a short guide which files should I modify for the table sharing in the multisites component. (by the way is it legal to modify the xml content in my JMS files?)

Regards!

Send us the JINC extension in the attachement of an email.
See the "contact us" menu for the email.

If you search for an email extension, have a look to the "AcyMailing".

You can always modify JMS files but in this case, you will have to re-apply your changes at each release of JMS.
