EasyBlog Admin component

Posted by swcomm - 2012/02/02 19:35

I have Easyblog working on some slave sites, but for some reason, the Easyblog administrator component wont't show up in the components menu for the slave sites. You can access by direct URL in slave site admin, but I need it in the menu. Easyblog suggested contacting you - pls advise. Thanks.

Did you re-install the Easyblog in the slave site or use the JMS Tool menu to install the easyblog in the slave site ?

Installed via normal Joomla extension discovery and install.
