## Change Control

Version	Date	Description
1.0	29-july-2008	Initial version
1.0.3	4-aug-2008	Update screen with JMS version 1.0.3 that use Joomla 1.5.5
1.0.5	19-aug-2008	Update screen with JMS version 1.0.5 that use Joomla 1.5.6 Add a slave site 'www.x2win.eu' to demonstrate that JMS can work with both domain and sub-domain

#### 1. Introduction

This document is a demonstration of the Joomla Multi Sites installation procedure. It shows you the installation of a Master site and three slave sites.

Because we have received some questions to know if Joomla Multi Sites can work with sub-domain and domain, in this demo, there are 2 slave sites using 'sub-domain' and one slave site using a domain name.

It highlight the important point to respect to ensure each site is seen independently.

In the current demonstration we have used a single database to store the content of all the websites. We have choosen this particular architecture because there are some constrain that must be respected to avoid conflict between the websites. If you use different databases for each websites, those constrains does not exists. See the user's manual for the possible architecture.

In the case of a single database, the table prefix 'jos\_' can not be used.

installation directory is restored and a "mutisites" directory is created with the slave sites directory.

#### 4. Installation Of the Slave Sites

Now, as the slave sites are defined, it is possible to connect on your domain slave sites and repeat the Joomla Installation.

Continue the Joomla Installation until you arrive to the database definition. In our sample, we have selected the same database than the master but we have change the table prefix "slave1\_"

In our sample, we continue until the main configuration is require and we give another title to the site

7 : Finish	following fields. This will be the password that you will need at the end of the installation process to login to the Administrator Control Panel together	Admin Password Confirm Admin Password	*****	
J.L	with the username admin. If you are migrating you can ignore this section as your current settings will be automatically migrated. Load Sample Data, Restore, or Migrat	te Backed Up	Content	
	Important! It is strongly recommended that new Joomla! Users should install the default Sample Data. This requires selecting the option <i>and</i> clicking on the button before moving to the next stage.	Install Default Sample Data	Installing this is strongly recommended for beginners. It will install default sample content that is included in the Joomla! installation package.	
	Before leaving the installation you can populate the site database with data. There are three options to do this:	Insta	II Sample Data	
	<ol> <li>Default Sample Data can be inserted - To do this select the first option and click the Install Sample Data button.</li> </ol>	C Load Migration Script	The migration script needs to be created on the old site by the com_migrator tool to conform. Enter the table prefix of the old site and enter the encoding used in old site (_150 setting in language file or as seen in browser	
	2.a Joomla! 1.5 Compatible SQL Script File can be uploaded from local host and executed on the site. This could be for installing localised sample data or restoring a Joomla 1.5 backup. The script		info/encoding/source), Joomla/ 1.5 Migration SQL scripts need to be Joomla 1.5 Compatible and should have the appropriate table prefix,	
	should have the correct table prefixes, should be in utf-8 encoding and should comply with Joomla! 1.5 database schema.	Maximum Upload Size Old Table	Your server's maximum file upload size is 16.00MB.	
		Prefix		

You can directly select administration.

Internet Explorer

#### 5. Selection of different default template on each Sites

We received multiple questions concerning the template and if each site can select its own default template.

The answer is YES. Each website can select it own default template.

The particularity of the Template and Languages is that they are only installed on the Master site. The installation on a slave site is disabled.

In our demo, we have used different default of Joomla standard 1.5.6

Master	rhuk_milkyway
Slave 1	JA_Purity
Slave 2	beez
X2win	beez
