Several sites,different templates,same db content

Posted by guilhermey - 2021/10/19 23:04

_____

Hi!
This is the intended architecture for our project:
- several different websites
- different subdomains under a same domain
- same database content (users, content, etc)
- different templates (one for each website).
Do you have an extension that can help?
Tks a lot!
