

This Jms Multisite version 1.3.10 fix a problem of compatibility with Joomla 2.5.10 and higher 2.5.x.

For more technical details concerning the change introduced in Joomla 2.5.10 see the bug tracker [30206](#)

This bug affect all the JMS extensions and the patch present in the JMS 1.3.07 definition consist in discard (rollback) the change applied by joomla.

The symptom is that when you install a package, joomla 2.5 use the manifest for Joomla 1.5 instead of the 2.5.

This result by the language file that are not installed (or updated) and the specific installation script that is not executed.

This does not affect Joomla 1.5 and 3.x

Other changes present in Jms Multisite 1.3.10

- Use the JMS Setting directory permission to create the cache, tmp, logs and template directory

Bundled with Patches definition 1.3.07

- Modify the Joomla installer patch to also remove the ordering of the manifest file detection when it is present.
