patch after update

Posted by sysadm - 2013/11/14 11:35

If go a error when I patch multisites after update of joomla 3.1.5 to joomla 3.2.0.

everything is oke except:
administrator/components/com_config/models/application.php
Not OK
The wrapper for the Master configuration is not present in Joomla administration
Actions:
Add 28 lines containing the wrapper to insert into the master configuration.php file
Update 1 line to save the appropriate configuration content

What could be the problem?

thx in advance

In joomla 3.2, they have revamped the code and move the file into another directory.
The files that was present in the "models" directory are now located into "model" without S.

You have to update JMS with version 1.3.24 to be compatible with Joomla 3.2
See the FAQ for the procedure to get the latest version
https://www.jms2win.com/en/faq/faq-joomla-multi-sites#cat-122
