

Jms multisite for joomla 1.3.52 (All Editions)

Bundled with Patches definition 1.3.48 that add Joomla 3.4 compatibility when re-installing an extension from a slave site.

A PHP Fatal error was raised when re-installing an extension for the slave site.

The error was due to a regression bug in core J3.4 that does not declare the JRegistry via their autoload.

The present work around add consists in adding the missing JRegistry declaration under J3.4.
