Check patches - Folder::create: Infinite loop ...

Posted by z3networks - 2019/01/03 13:14

I have Jms Multi Sites Module version 1.3.75 installed on Joomla 3.8.13 and 3.9.x today. At Check patch installation I get the above error: Joomla Filesystem Folder :: create: Infinite loop detected.

What do I have to do to prevent this error from occurring?

I suspect a permission issue that would forbid to create a directory.
Perhaps this is when JMS tries to create the /installation directory in the root of the website.

If this is a permission issue, sometimes, you can bypass such kind of thing when enabling the joomla FTP layer.
This can be done when you setup the FTP parameters in the "global configuration".

I hope this will help you
Happy new year
