General Upgrade of Components, Modules, Plugins

Posted by Nica521 - 2009/02/18 06:42

Hi Again.

I was wondering about how I update some plugins to a new version. I tried uninstalling them, however I get this error..."Plugin Uninstall: Manifest File invalid or not found"

When I try and install over it , I get a message saying plugin already installed.

The Slave is symbolically linked.

How do you upgrade components, etc?

Cheers

The update must allways be performed first from the master website and not from the slave site.
