multisites/article sharing - article sliders

Posted by geirk - 2009/02/28 20:32

I have tried a couple of article sliders, but they does not seem to bee working with multisites/article sharing.

Have tried: mod_featureditems and mod_jw_ucd-v1.1_j1.5

How can I show articles from the local site along with the ones from the mastersite on slave frontpages?

I don't know if the problem is in the same websites that you refered in another post but I have seen that you don't have put URL for some pictures in the slider.
I don't know those component and their configuration.
Can you give a detail description on how this problem can be reproduced to allow the analysis of this issue
