New keywords

Several keywords are added to allow creating random value composed of alphanumeric characters or only letter or start with a letter followed by a random string or using and auto increment values.

Here are the keywords added

- {rnd_alnum_6} to {rnd_alnum_10} : Random string that only contain letters and digits on a length of 6 to 10 characters. The letters can be Uppercase or in lowercase.
 - {rnd alnum}: Random alpha numeric string with a length of 8 characters
- {rnd_word_6} to {rnd_word_10} : Random word contain uppercase or lowercase letters on a length of 6 to 10 characters.
 - {rnd_word} : Random word with a length of 8 characters
- {rnd_prefix_6} to {rnd_prefix_10} : Random alphanumeric string in lowercase only and starting with a letter and containing only lowercase letters on a length of 6 to 10 characters.
- {rnd_prefix}: Random alphanumeric string in lowercase only and starting with a letter and containing only lowercase letters with a length of 8 characters
- {autoinc+offset}: Auto-increment number starting at 1 to which an offset number can be added. ie. {autoinc+100} will start at 101.
 - {autoinc}: Auto-increment number that is starting at number 1

Keywords to parse the current user email address is also added:

- {user_email_left} : This is the current logged joomla user email left part (before the at @)
- **{user_email_left_alnum}** : Same as {user_email_left} and remove all special character. Just keep the letter, digits and the '-' character.
- **{user_email_right}**: This is the domain name of the logged joomla user email address. This is the right part after the at @ character.
- {user_email_right-1} to {user_email_right-n} : This extract the part present in the domain name from right to left using the dot (.) as separator.
