Check Patches Installation

Posted by kmonty78 - 2012/12/20 02:22

I installed the component and try to install patches on a fresh install of Joomla 3.0.2.

Jms Multi Sites Version : 1.3.0 - FULL
PHP 5.4.6-1ubuntu1.1 (fpm-fcgi) (built: Nov 15 2012 01:27:09)
 Zend Engine v2.4.0, Copyright (c) 1998-2012 Zend Technologies
  with the ionCube PHP Loader v4.2.2, Copyright (c) 2002-2012, by ionCube Ltd.,
  with XCache v2.0.0, Copyright (c) 2005-2012, by mOo
 nginx version: nginx/1.2.1
 TLS SNI support enabled
The current path is "/var/www/clients/client1/web1/web"
Symbolic Link is PRESENT on Linux platform
root@web:/var/www/sample.com/web# ls -l
total 148

-rw-r--r-- 1 web1 client1 1715 Dec 19 12:53 web.config.txt

cat /etc/group | grep client1
client1:x:5005:www-data
cat /etc/group
www-data:x:33:
sshusers:x:5002:web1,web2

ispapps:x:5003:www-data
ispconfig:x:5004:www-data
Tried setting files-only to 664 and 774 and enabling FTP on Joomla 3 Config. I still have no luck getting the patches to install.

error.log - empty :angry:
Well not empty warnings and notices
2012/12/19 19:04:52 5518#0: *10 FastCGI sent in stderr: "PHP message: PHP Notice: Trying to get property of non-object in /var/www/clients/client1/web1/web/libraries/legacy/module/helper.php on line 150
PHP message: PHP Notice: Trying to get property of non-object in /var/www/clients/client1/web1/web/libraries/legacy/module/helper.php on line 154
PHP message: PHP Notice: Trying to get property of non-object in /var/www/clients/client1/web1/web/libraries/legacy/module/helper.php on line 160
PHP message: PHP Warning: Creating default object from empty value in /var/www/clients/client1/web1/web/libraries/legacy/module/helper.php on line 160
PHP message: PHP Notice: Undefined property: stdClass::$content in /var/www/clients/client1/web1/web/templates/system/html/modules.php on line 17" while reading response header from upstream, client: 66.249.74.129, server: nuvul.com, request: "GET /2-some-person/friends HTTP/1.1", upstream: "fastcgi://unix:/var/lib/php5-fpm/web1.sock:", host: "www.sample.com"
Which I don't believe relates to my issue, part seems to be google bots.

Now looking for a hint/clue of where to look, or if something is obvious, would love to know where to search.

Thanks, :)

Which is the JMS error message ?
Can you provide a screenshot that show clearly the error message present in JMS ?

All the things that you have provided correpond to PHP Warning in joomla 3.0.2 (core) and also messages coming from FastCGI that is related to the configuration of you domain.

That was my problem, was only seeing a 500 error message. I wish it was showing me a bit more to go on. Tho, I loaded up another VM on xen hypervisor, with only that site using Nginx PHP5-FPM and fcgiwrapper and it installed on the standalone server. The other VM the issue was on is running the same setup with ISPConfig 3.0.4.6 to manage the sites, which could be part of the problem with permissions or something.

Before I make a VM for this site alone, let me ask if there is an ideal setup for this. I was refraining from using Apache2 due to the huge speed boosts of Nginx.

Thanks, ;)
