multisite hosting
Posted by neighbo3 - 2011/01/17 02:36

Hi
I have just had my multisite software added and would like to know what requirements do I need from my hosting provider (I am now with Siteground)
What questions do I need to ask them?
Cheers Veronica

Sorry but we don't know all the hosting companies.
If you have purchased our software, I suggest that you create a small environment to verify if it works perfectly on this hosting company.

If don't have purchased our product, you can install the "hello world" program as explained in the tutorial video 7
http://www.jms2win.com/en/tutorial#jms12x-7

Also check if you can create views in MySQL DB.
See tutorial video 0.b - slide 35 that show a setup for cPanel.

We worked yesterday on a siteground for another customer.
The symbolic link works.
Concerning the DB, you have to ask increase the MySQL user privileges and they do it.
So that should work.
