Problems with extrawatch

Posted by genxter - 2013/08/31 00:45

Hello,
I have the module from codegravity installed, to see the behavoir of my visitors. I can install the component with no problems but a soon I applying the patches to the coremy extrawatch module is not running anymore. The javescript error reporting tells me this error:

Resource interpreted as Script but transferred with MIME type text/html: "/".
index.php?option=com_extrawatch (1257):454
Uncaught SyntaxError: Unexpected token 2
Resource interpreted as Script but transferred with MIME type text/html: "/".
index.php?option=com_extrawatch (1257):454
Uncaught ReferenceError: extrawatch_sendLastIdReq is not defined

So my questions is; What is causing this error as soon I apply the patches?

Greetz

Sorry but I don't know this extrawatch module and In you message, there is no information on the file name and line number where such error can occur.

Can you send us the component and module with a description on how to reproduce it.
Our email can be found in the "contact us"
