Multisite component - Site offline issue

Posted by abhijoom000 - 2013/11/11 17:33

Hello

We are facing a problem with Multisite component(com_multisite), we marked "yes" to "site offline" option in "global configration " of Joomla 2.5 But site is still working online.

We are using JSN Power Admin as a administrator, but still unable to offline the site.

I don't know on which version of JMS that you have this problem but I have verified that on a joomla 2.5 with JMS 1.3 and the "Offline" = 1 in the configuration.php and this is working perfectly.

This is working perfectly on a standard joomla using the standard back-end and template.

I don't know if the problem that you are facing is related to JSN that perhaps do change the behavior of Joomla for the off line.
