Sharing JV-LinkDirectory and Google .

Posted by rezamoghtada - 2012/05/21 12:56

Dear Edwin
I would like to share JV-LinkDirectory in my all websites.
I see by sharing this extension, the link directory with all link will share between all websites, for example if some one give a link to only one website it means links to all the website share the JV-LinkDirectory.
But what about Google? wont Google except this links as unnatural, bad link or fake link?
Thank you for your help,
Reza

When you share the content of JV-LinkDirectory, you have exactly the same content that is displayed by the different websites.

Concerning how google will consider this link, I don't know.

All I can tell you that google may give penalties when there is duplicated content.
