Fatal error: Class 'JConfig' not found

Posted by Grafeio20 - 2014/06/03 17:30

---

just after we installed com_multisites_V1.3.29
in one of our slave sites
we received the following error and now we cannot login to the site

Fatal error: Class 'JConfig' not found in
/public_html/administrator/includes/framework.php on line 46

What shall we do to repair this error

Thank you very much in advance

Can you mention which version of Joomla you are using.
Can you redo the same with the latest JMS version (1.3.33).
See the FAQ for the procedure to get the latest version
https://www.jms2win.com/en/faq/faq-joomla-multi-sites#cat-122

JConfig is the class that is created by the "configuration.php" file.
Perhaps that you should verify that you have access to the "configuration.php" file in your slave site.

This message let suppose that the "configuration.php" file is not found.
