use CB facebook plagin and CB twitter plagin.

Posted by rezamoghtada - 2011/07/02 11:05

Dear Edwin,
I would like to share Community Builder with my different website i shared by JMS multisite and also use CB facebook plagin and CB twitter plagin, in master site i haven't any problem but in Slaves sites i have problem with IPA key,
Could you help me please.
Regards
Reza

Which is the problem with the IPA Key ?

Do you need several key (one per website) ?
If yes and if the key is present in the page somewhere, you could perhaps use the Search/Replace plugin to replace a specific keywork with the value of the IPA key corresponding to your domain or subdomain.
See Search/Replace plugin
http://www.jms2win.com/en/component/docman/doc_details/13-search--replace-utility

This is a method that we already used for Google Map key.

Dear Edwin,
Can i use only one Facebook IPA key and only one Twitter IPA key for all my website (Master and Slives)?
If yes how i can do it?
Best Regards
Reza

Sorry but I don't know the constrain related to the Facebook and Twitter key.

I don't know if there are domain, subdomain related.

See facebook and twitter for that.
