| Which is the problem with the IPA Key ? |
| Do you need several key (one per website)? If yes and if the key is present in the page somewhere, you could perhaps use the Search/Replace plugin to replace a specific keywork with the value of the IPA key corresponding to your domain or subdomain. See Search/Replace plugin |
| http://www.jms2win.com/en/component/docman/doc_details/13-searchreplace-utility |
| This is a method that we already used for Google Map key. |

Sorry but I don't know the constrain related to the Facebook and Twitter key.

JMS, multisite for joomla - Joomla Multiple Sites and user sharing Generated: 2 January, 2026, 03:43 I don't know if there are domain, subdomain related. See facebook and twitter for that. ______
