Compability issue with module SCLogin

Posted by canadareic - 2015/07/20 05:29

Hello
would you mind reading our support request on this portal (especially last reply from the developer)

https://www.sourcecoast.com/forums/non-commercial-extensions/sclogin-enhanced-login/10690-popup-in-full-screen

issue is caused by jms2win component as he suggested to contact you for help.(which will be appreciated)

thank you

Can you send us this module in the attachement of an email for a review.

I suspect that the extension compute the path itself and not use the JPATH_ROOT.
When calling the php realpath function, this return the physical location of a file and not relative path to the "document root" of the website.
This may result later by a wrong CSS path computation.

If your symptom is a wrong path to a CSS or things like that, that would mean that realpath function is

probably used instead of the JPATH_ROOT.
