Sharign or download JV-LinkDirectory Module.

Posted by rezamoghtada - 2011/11/17 09:50

Dear Edwin,
JV-LinkDirectory has a Module that can not share in JMS (Risk to define this extension)
This module is very useful for JV-LinkDirectory,
May i ask you kindly have a look for review so maybe this module can share or at least download in Slave site.
The file is at the attachment.
Regards
Reza http://www.jms2win.com/images/fbfiles/files/mod_jvse1.zip

We will add the definition of this module but the sharing is mainly driven by the compoent.
As the composent JVSE can already be shared in Joomla 1.5, you can define the extension and this will automatically use the shared tables associated with the component.

If you are runing on Joomla 1.7, please send us the component for joomla 1.7 for review.

Dear Edwin,
Thank you for replay,
I am running joomla 1.7
Please see the extension file at the atchment for rivew.
Regards
Reza

Normally, JVSE component is already defined for the sharing under joomla 1.7.
The module or the plugins are never defined for the sharing except very rare cases when a component does not exists.
In this case, you can just define the module and it will be automatically shared as soon as you have shared the content of the JVSE component.

We will add the definition of modules and plugins that you send us in a next release of JMS
