Cant access the site with www in Slave sites.

Posted by rezamoghtada - 2012/04/10 10:16

_____

Dear Edwin,
I can not access to my slave sites with www
But in my main site i have no problem.
Please see the links below,
My main site is roomglobal.com and i can access with wwww or without www
But my slave site same as otelturkey.com i can access only without www and if i add www it will go to a page like this: www.otelturkey.com

My i ask you to help my find a solution for this problem.

Best Regards
Reza

_____

Verify that you have defined in the JMS slave site the domain with and without the WWW.

So in your slave site definition, the domain should be
www.yourdomain.com
yourdomain.com

_____

Dear Edwin,
Thank you for your help,
It works for slave sites with domain and now the slave sites which using domain have not any problem,
But it does not work for slave site with subdomain,
What do i have to do with slave saites using subdomain?
Regards
Reza

_____

If you have subdomain that also propose the alternative like www.subdomain.domain.com then you also have to add the www in front of the subdomain.

JMS perform an exact matching.
So you have to enter all the variant that want for a specific website.

Sometimes, you also have to add the port for rss feed.
So you may sometimes enter www.domain.com:80 to reflect the port 80

You also have to enter the httpS when you want to use the secure HTTP
