article sharing not linking to proper articles

Posted by jamiefowlie - 2016/10/23 22:04

I have a two slaves sites in which I want to share news.

I have created the category in slave 1 and in slave 2 using the menu created a blog category from slave 1

In the links from the titles the user is taken to other articles none of which are even news category articles. I cannot find any solution to this anywhere online.

Can you precise the version of Joomla and the version of the Article Sharing that you are using.
You can always download the latest version of the product.
See the FAQ for the procedure.

I upgraded to the latest versions during testing, but the problem persisted.
