500 internal server error need help please

Posted by mdhissam - 2009/12/21 19:03

---

hi edwin,

1.i deleted one of the slave site on and its database.

2. after that i tried to create another slave site by providing the required information and click create it gave me an internal server error.

3. i cant login into mu joomla website and the front end show the same internal server error too.

i badly need help i am in a verge to finish this project please help

How did you solved the issue ..? i am also having the same problem. But there is no problem with my Joomla main site . Actually I have moved the site to a new server recently. Then all these problems starts to appear. Now whenI take the index.php of the subsite it is showing the 500 internal server error. Could anyone help me..? Please consider it as urgent.

Alwin
