Determine site id in PHP? Posted by meteu336 - 2009/06/15 02:12
Is is possible (without parsing the baseurl) to determine the site_id from within the PHP code?
Like if I want to have custom CSS styles even though each slave has the same theme
Re:Determine site_id in PHP? Posted by edwin2win - 2009/06/15 09:58
YES.
The site id is saved iin MULTISITES_ID define. When this is a slave, the MULTISITES_ID is defined. When not defined, this is the master website.
