

## Joomla 1.7 and subdirectories

Posted by izoumos - 2011/08/02 09:25

---

Hello,

I'd like to install one instance of Joomla 1.7 that will support subdirectories sites that will use the all Joomla features.

Example:

[www.mysite.com](http://www.mysite.com)

[www.mysite.com/subsite1](http://www.mysite.com/subsite1)

[www.mysite.com/subsite2](http://www.mysite.com/subsite2)

[www.mysite.com/subsite3](http://www.mysite.com/subsite3)

We want to have authorised users only one some subsites.

All the forum threats I found were for subdomains but nt for subdirectories support. Is there any chance to support that?

In wordpress this features it comes by default.

Thanks,

loulios

JMS is able to parse domain, subdomains and subirectories.  
So yes you can do that.

The subdirectories case is illustrated in the video 9.

<http://www.jms2win.com/en/tutorial#jms12x-9>

and also in the video 0.d

<http://www.jms2win.com/en/tutorial#jms12x-0d>
