Forum for JMS

Posted by edblack - 2011/09/04 16:32

I want to setup a forum on slave site that will replicate on other slave sites. Is there a extension or plugin for jms

This is present in the core of JMS.
You just have to setup a JMS Template rule to replicate the website "ready to use" with the forum.

The other solution is to have created an architecture like presented in video 0.b slide 24. In this case, when you install an extension in the group with the JMS Tool menu, you can also ask to propagate the action to all the children websites.
