

## Joomla Templates does not apply

Posted by shag3doo - 2009/05/20 04:22

---

Hi,

I just bought this component and just finished configuring 1 site. I ran into some problems when i installed a new theme.

Here are the scenarios i've tried

1. Installed the template on the slave site
  - Template appears on the slave site but if i make it the default template it comes back to JA\_Purity template.
  - If i use beez or other default template, it changes
2. Installed the template on the master site
  - Template appears on the slave site but only JA\_purity still appears
  - Tried to apply the template on the master site and it did reflect

am i missing something?

I will try to reproduce the scenario you have described
