Joomla Templates does not apply Posted by shag3doo - 2009/05/20 04:22
Hi,
I just bought this component and just finished configuring 1 site. I ran into some problems when i installed a new theme.
Here are the scenarios i've tried 1. Installed the template on the slave site - Template appears on the slave site but if i make it the default template it comes back to JA_Purity template. - If i use beez or other default template, it changes
2. Installed the template on the master siteTemplate appears on the slave site but only JA_purity still appearsTried to apply the template on the master site and it did reflect
am i missing something?
